

# Procedures

## Page Layout and Design

For our design, we wanted to keep it as modern as possible while keeping it aesthetically pleasing. We decided to go with a one page design as they seem to be a modern trend. We kept our design as consistent as possible by maintaining the same color scheme and typography throughout the site. While maintaining this modern trend that is one page design, we wanted to be as creative as possible - to do this we took advantage of Bootstrap's modals to present the nutritional values of the foods listed in the 'Our favorite menu items' sections. To keep the design as usable as possible, we kept it simple and took advantage of white space.

## Content

When considering the content, we made sure to spell check all of our sentences and paragraphs, as well as looking over the grammar multiple times to make sure there was no mistake to be found. When looking for images and software to use in the building of the site, we made sure to keep track of the rights of the author of the photos to make sure there was no copyright infringement. All photos that we used were correctly researched in making sure to not violate the author's rights. We tried to make sure the message of a gluten-free restaurant was as clear as possible so potential visitors of the site could understand. We made sure to keep a consistent and fully developed theme.

## Technical

On the technical sides of things, multiple hours went into making sure the site was usable no matter the browser so the site could be accessible to all, this was done by using multiple types of css that allow us to have control of the css differently depending on the browser. We made sure to keep the code as clean as possible so that anyone that wanted to learn or adapt from our code could easily understand and be able to read it. We tried our absolute best to make sure that the code and website in general was error free. Keeping the site compatible with all browsers was a must, as earlier described we used multiple variants of CSS classes to make sure the site worked well across all browsers.
